VXLAN EVPN spine-leaf network topology

Design legend

Fabric underlay

2 spines and 4 leaves run an eBGP routed underlay. Redundant spine paths provide ECMP reachability across the fabric.

EVPN and VXLAN

MP-BGP EVPN distributes overlay reachability. VLAN 10 maps to VNI 10010 and VLAN 20 maps to VNI 10020; both are extended across the leaf fabric.

Dual-homed endpoints

Four Linux hosts are dual-homed to leaf pairs using LACP bonds and EVPN all-active Ethernet Segment multihoming.

Inter-zone security

FortiGate provides the VLAN 10 and VLAN 20 gateways (192.168.10.1 and 192.168.20.1). Zone policies govern routed traffic between the networks.

Firewall high availability

The FortiGate pair runs active-passive HA with a dedicated heartbeat. Each firewall has a dual-leaf LACP aggregate; aggregate health is monitored for failover.
